

Add on Health Care Hospital Website Improvement Report

Introduction

This report offers two options for improving the Add on Health Care Hospital website: a static approach and a dynamic approach. Each section will detail how these options can be implemented

Option 1: Static Website

Design Improvement:

- We can change overall design into attractive and user-friendly format
- We can add smooth animations and hover effects
- We can fix the issue in Navbar on View reports page and contact page (There navbar doesn't have any background colour)

Doctors Page:

- We can provide data of all doctors manually on a doctor's page. Changes to doctor details or adding new doctor require a developer's help.
- Display all the details of doctors (name, image, specialization and experience)

Services Page:

- We can provide data of all services manually on a doctor's page. Changes to service details or adding new service require a developer's help.
- Display all services with attractive design

Blogs Page:

- We can provide data of all blogs manually on a blog page. Changes to blog details or adding new blog or remove existing blog require a developer's help.
- Display all the content of blog with attractive card design

Events Page:

- We can provide data of all events manually on an event page. Changes to event details or adding new event or remove existing event require a developer's help.
- Display all the content of event with user-friendly design

Contact Page:

- We can provide all hospital details (location, map, phone number and email)
- We can include a contact form on this page that sends messages directly to the hospital's Gmail. This will streamline communication by allowing patients to easily reach out with questions or concerns, and the hospital staff will receive these messages instantly in their Gmail inbox

Schedule Appointment Page:

- We can include a form on this page allowing users to schedule appointments by providing their name, email, WhatsApp number, date, age, gender, symptoms, and a description. The submitted information will be sent directly to the hospital's Gmail.

Loading Speed:

- Increase Loading speed by compressing and optimizing images
- We can add smooth loader to the page (currently there is no loader)

How Much Time Will It Take:

- The project is expected to take approximately 12 Days to complete. This timeframe includes design, development, and deployment phases.

Software We Are Using:

- **Frontend:** HTML, CSS, JavaScript, Bootstrap
- **PHPMailer:** For Gmail Service
- **AOS:** For animation

Deployment Server:

- We are planning to use Hostinger for deployment.

Option 2: Dynamic Website

Design Improvement:

- We can change overall design into attractive and user-friendly format
- We can add smooth animations and hover effects
- We can fix the issue in Navbar on View reports page and contact page (There navbar doesn't have any background colour)

Doctors Page:

- Display all the details of doctors (name, image, specialization and experience)
- We can provide an admin panel for updating doctor details, adding new doctors, and deleting doctors.

Services Page:

- Display all services with attractive design
- We can provide an admin panel for updating service, adding new service, and deleting existing service

Blogs Page:

- Display all the content of blog with attractive card design
- We can provide an admin panel for updating blog, adding new blog, and deleting existing blogs

Events Page:

- Display all the content of event with user-friendly design
- We can provide an admin panel for updating event, adding new event, and deleting existing events

Contact Page:

- We can provide all hospital details (location, map, phone number and email)
- We can include a contact form on this page that sends messages directly to the hospital's Gmail and also to the admin panel. This will streamline communication by allowing patients to easily reach out with questions or concerns, and the hospital staff will receive these messages instantly in their Gmail inbox and admin panel

Schedule Appointment Page:

- We can include a form on this page allowing users to schedule appointments by providing their name, email, WhatsApp number, date, age, gender, symptoms, and a description, and selecting a doctor. The submitted information will be sent directly to the hospital's Gmail and the admin panel.
- Admin can manage appointment limits per doctor. If a doctor reaches the limit (e.g., 10 appointments), a notification will inform users that today's appointments are full.
- Integrate Razorpay for secure and easy payment processing during appointment scheduling.
- We can set certain amount for each doctor's appointment from admin panel

Loading Speed:

- Increase Loading speed by compressing and optimizing images
- We can add smooth loader to the page (currently there is no loader)

How Much Time Will It Take:

- The project is expected to take approximately 26 Days to complete. This timeframe includes design website and admin panel, development, and deployment phases.

Software We Are Using:

- **Backend:** Django
- **Frontend:** HTML, CSS, JavaScript, Bootstrap
- **Database:** PostgreSQL
- **PHPMailer:** For Gmail Service
- **AOS:** For animation

Deployment Server:

- We are planning to use Digital Ocean, Ubuntu and Nginx for deployment. Cloudflare to connect domain and IP Address
